# Sprint 5 — At a Glance

April 17 – May 1, 2026 · 27 commits · 5 contributors

| 27 | 6 | 8+ | 518 |
|---|---|---|---|
| Commits | Major Features | Bugs Fixed | Test Lines Added |

## New Features & Improvements

- **Admin Dashboard:** Full triage UI with auth, 3 tabs, queue helpers
- **Real SMS Auth:** Live TextBelt codes for requester login
- **Delivery ETA:** Haversine tracking + live location sharing
- **Complaint Flow:** Requesters can report concerns from order status

## Quality & Testing

- **Playwright E2E:** Full requester ↔ volunteer flow + edge cases
- **Jest Unit Tests:** Validator coverage: 518 lines of test code
- **Volunteer UX:** Email-only login, per-box item preview
- **UI Polish:** Revamped 8+ screens, global theme system

NEW

# Features Built

Admin Dashboard · Real SMS Auth · ETA Tracking · Complaint Reporting

# Admin Dashboard UI

Brand-new pantry triage interface — built from scratch in Sprint 5

## Menu Setup

Manage global requester menu sections and items. Add, edit, or remove items that show up in the requester ordering flow.

Live Supabase sync · Item editor modal

## Order Cancellations

Triage queue: remove stuck or invalid orders and clear the pipeline for active volunteers.

Age indicators · One-tap cancel

## Complaint Handling

Review and resolve safety or service complaints submitted by requesters, with full context on each report.

Open / resolved status · Requester context

Also includes: simple password auth · persistent session · queue metrics · helper library (272 lines)

**~1,800 lines added across 5 commits • lib/adminDashboard.js + app/admin-dashboard.jsx**

# Real SMS Auth & Delivery ETA Tracking

Two major backend enhancements shipped in Sprint 5

## Real SMS Authentication

**TextBelt integration**

- Requesters receive a real 6-digit code via SMS to their registered phone
- Server sends live codes via TextBelt; 1234567890 bypasses SMS for demos
- Backend validates code against a pantry-users JSON registry
- Added second demo pantry user with a real verified phone number
- Fixed verification code constant causing silent auth failures

## Delivery ETA Tracking

**Haversine formula · Live GPS location sharing**

- ETA preview shown on volunteer dashboard before order acceptance
- Haversine distance calc (lib/deliveryTracking.js) — accurate to ~0.1 mi
- Volunteer auto-shares GPS location every 2 min while IN_TRANSIT
- Requester order-status screen updates in real time with latest ETA
- SMS notification sent to requester when volunteer accepts the order

# Complaint Reporting & Volunteer UX Improvements

In-app safety reporting + dashboard clarity improvements

## Requester Complaint Reporting

**Safety & service concerns surfaced in-app**

- Report Concern button on order-status and confirm-delivery screens
- ReportConcernModal expanded with categorized concern types
- Submissions stored in Supabase and surfaced in Admin complaint tab
- Admin can mark complaints open or resolved with requester context
- Closes the loop between requester reports and pantry staff triage

## Volunteer Dashboard Improvements

**Hamdan — built on top of Safal's UI base**

- Email-only login — removed dead username path
- Box/item contents fetched and shown before volunteer commits
- renderBoxSummary: per-box item breakdown in card & modal
- Volunteer-facing status copy separate from customer copy
- 'Update ETA' renamed → 'Share My Location with Customer'
- SMS notification to customer on acceptance restored

# TESTING

# & Quality Assurance

Playwright End-to-End · Jest Unit Tests · 518+ lines of test code

# End-to-End Testing — Playwright

Full browser automation of the requester ↔ volunteer delivery flow

**Requester Logs In**
Phone + DOB + SMS code

**Places Order**
Items, boxes & review

**Volunteer Accepts**
ETA preview & contents

**Delivery Confirmed**
Status sync & ETA update

**Re-order Flow**
Redirects & edge cases

## What's Covered

- Requester sign-in via SMS and DOB verification
- Full order placement: item selection, box config, review
- Volunteer acceptance with ETA preview check
- Delivery confirmation and status state machine
- Re-order redirect loop detection (was a live bug)
- Multi-requester concurrency edge cases

## Infrastructure

- playwright.config.ts — Expo web base URL wiring
- e2e/helpers/backend.ts — seed, reset, wait helpers (258 lines)
- testId attributes added to all key interactive elements
- Auto-accept dialog helper handles native Alert() popups
- Expanded to ~470 lines with edge case pass in follow-up
- Runs on CI — core flow no longer requires manual testing

# Unit Testing — Jest

Validator logic coverage for requester and volunteer sign-in flows · Max

**319**
Requester Validator Tests

**199**
Volunteer Validator Tests

**8+**
Config & Module Files Added

## What's Tested

- **formatDobInput()** Formats digit strings to MM/DD/YYYY — 8 edge cases
- **validatePhoneNumber()** 10-digit US phone, length & char edge cases
- **validateDateOfBirth()** DOB validity, age range, future date rejection
- **validateVerificationCode()** Exact 6-digit code format enforcement
- **validateEmail()** RFC-style email validation for volunteer sign-up
- **validatePassword()** Length & complexity rules, empty input guards
- **validateName()** Required field & max-length constraints
- **Boundary cases** Empty string, null, very long input, special chars

# BUGS & Fixes

8 bugs squashed across auth, navigation, data, and infrastructure

# Bugs Encountered & Fixes

### Order-again redirect loop

`order-food.jsx`

Bug: After re-order, app looped to start instead of order-status

Fix: Guard added: redirect to order-status when last order is DELIVERED

### Supabase crash on Expo web SSR

`supabase.js`

Bug: AsyncStorage calls during server-side render broke web builds

Fix: Wrapped storage in platform check; SSR path uses a no-op stub

### Volunteer sign-up missing DB entry

`volunteer-signin.jsx`

Bug: Sign-up wrote to users but not volunteers; dashboard showed empty

Fix: Check-and-insert on sign-in backfills missing volunteer record

### SMS notification dropped in merge

`volunteer-dashboard.jsx`

Bug: Merge conflict resolution removed the TextBelt call on accept

Fix: Restored SMS send in volunteer-dashboard acceptance handler

### Stray Expo geocode route

`_layout.jsx`

Bug: Orphaned /geocode route caused routing warnings in Expo

Fix: Removed unused route file entirely from the app router

### Admin item editor stale closure

`admin-dashboard.jsx`

Bug: Edit triggered save on wrong row due to stale closure in list

Fix: Refactored to keyed modal with explicit item ID binding

### Verification code constant mismatch

`requester.jsx`

Bug: Demo bypass constant didn't match server, silently failing auth

Fix: Unified constant client/server; added test coverage for value

### Duplicate pantry requester record

`pantry-users.json`

Bug: Two entries with same phone gave ambiguous auth response

Fix: Deduplicated pantry-users.json; lint step added to prevent recurrence

# Team Contributions

Sprint 5 — who built what

## Safal

**Sprint Lead / Full-stack**

- Admin dashboard — all 3 tabs, auth, helpers lib
- Real SMS auth + server refactor
- Delivery ETA tracking + lib/deliveryTracking.js
- Playwright E2E test suite setup & expansion
- Requester complaint reporting flow
- 5 bug fixes (redirect, Supabase SSR, admin editor…)
- UI polish across 8+ screens + global theme

## Hamdan

**Volunteer Dashboard**

- Email-only login — removed dead username path
- Per-box item preview before volunteer commits
- Auto GPS share every 2 min while IN_TRANSIT
- Volunteer-facing status descriptions
- 'Update ETA' → 'Share My Location' rename
- SMS restore on order acceptance

## Nhien

**Sprint 5 — Feature Branch**

- nhien-sprint5 branch maintained for sprint
- Supporting testing & integration work

## Max

**Testing Infrastructure**

- Jest framework + jest.config.js setup
- requesterValidators.test.js (319 lines)
- volunteerValidators.test.js (199 lines)
- Extracted validators module for testability
- DOB, phone, code, email validator coverage

## Beck

**Demo Setup & Testing**

- Added Beck's number as real SMS demo user
- Fixed demo account address (invalid → valid)

# Sprint 5 — Key Takeaways

### Full-stack depth

From SMS backend to Playwright browser automation — covered every layer

### Test coverage shipped

518+ lines of test code; both unit and E2E now committed to the repo

### Admin panel closed loop

Pantry staff can manage menus and triage complaints without a developer

### Bug discipline

8 bugs caught and fixed — many discovered through the new E2E suite

### Team coordination

5 contributors merged cleanly; Hamdan's branch layered on Safal's UI base
